During the production of the integrated machine, quality control is carried out throughout. From the storage of raw materials to the delivery of finished products, each link has strict quality inspection. At the same time, a product traceability system is established to record the production batch, component source and other information of each product. Once a problem is found, it can be quickly located and solved to ensure product quality and user satisfaction.

Selling Points

1. Home entertainment center: All-in-one computers support 4K video playback and high-quality audio to create an immersive home theater experience.
2. Remote office tool: Built-in HD camera and microphone, support video conferencing, suitable for remote office or online education.
3. Fast startup: Equipped with a solid-state drive, the boot and software loading speeds are extremely fast, improving usage efficiency.
4. Health management: Some models are equipped with health monitoring functions, such as sedentary reminders, to help users develop good habits.
5. Children's mode: Built-in children's exclusive mode, providing a safe Internet environment and educational content, suitable for family use.

Theory

All-in-one computers have built-in speakers and microphones to achieve audio and video integration. The principle is that the sound signal is processed by the audio chip and then output through the speaker. The video signal is processed by the graphics card and displayed through the monitor. This design simplifies the complexity of external devices and improves the multimedia experience.
